PUBLIC ENGAGEMENT

Summer school of Russian language

University holds free [summer schools for Russian language](#) teachers from Mongolia and China. The intensive training took place at INRTU Baikal School of BRICS. Participants attended lectures and practical classes, improved their pronunciation skills, and learned new teaching techniques. INRTU teaching staff is actively involved in an educational program which is supplemented by cultural events to introduce Russian traditions, local sights and rich history of the region. The guests are usually given excursions to the city museums, trips to Baikal. [Summer School](#) seminars cover not only aspects of the Russian language learning, but also issues of sustainable development in the region.

INRTU Tochka Kipenia

INRTU hosts and holds different educational online and offline free [events for general public](#) primarily at Tochka Kipenia space and Leader-ID platform as well as on other University grounds. INRTU annually holds a series of diverse activities ([lectures, quests, master-classes](#) etc) open for external audience. INRTU "Tochka Kipeniya" space is open for external audience both as participants of organized events and as organizers of different activities. This is a space of collective work, [created for educational and project activities](#), designed for the work of students and student communities, teachers and graduate students, scientists, entrepreneurs, representatives of public organizations and professional communities, allowing the implementation of modern formats of extracurricular activities of professional competencies of students.

Specialized classes

The University is committed to sustainable development in every area of its work, including education, management system, recycling policy. Both university faculty and students participate in a vast array of activities and events aimed at promoting the ideas of sustainability. In 2023 the most bright of them were [Mendelev's classes](#) and [Alosa class](#).

INRTU students studying Industrial ecology mentored projects of schoolchildren from Ussolye Sibirskoye. The authors whose projects are approved by the federal expert commission will take part in Mendelev's expedition.

OPERATIONS

Advanced training programs

INRTU units (Interdisciplinary Regional Center for Advanced Training, Oil and Gas Training Center, corporate research center 'EuroSibEnerg - INRTU' etc) offer a wide range of professional retraining and advanced training programs in multiple fields (management, oil and gas industry, power engineering, law etc). On regular basis INRTU holds various acceleration programs for representatives of local business and industry communities. In 2023 INRTU for the first time launched courses on the use and administration of the [Astra Linux operating system](#). The pilot course was attended by 18 employees of state organizations in the Angara region.

Digital platform of Open Education Centre

The digital platform of the [Open Education Center](#) "All-Lands Heart" has been launched at INRTU. The platform is aimed at the linguistic and cultural adaptation of foreign students. The project includes 4 educational info-blocks, 20 online courses. Each unit is scheduled for 36 hours of self-study. The training contains interactive content, video materials that help overcome language and cultural barriers. Free online courses develop the communication skills of foreign students, allow them to see the picturesque nature of Irkutsk region, evaluate the advantages of studying in Eastern Siberia. Future students will learn about the advantages of INRTU, prospects of graduates, INRTU scientific activity, cultural and sports life, the campus key facilities. Each participant of the project successfully completed the training, is given confirming certificate.
